

# Remote homeschooling: pros and cons

Times home teachers and Tutors finally sunk into oblivion, gradually receding into the past and traditional school. Disgruntled parents and children looking for ways of learning at home, however, not all people can manage homeschooling. So to help them come online and distance education. It is worth noting that the transition to learning in distance education involves, you'll have plenty of time to talk about it to interested friends. And it's time to follow the example of remote schools and to move from oral conversations in convenient digital format. So

## How it works?

Everything happens with the help of technology and the world wide web. On the one hand there is you and your laptop / tablet / phone / etc., and on the other teachers and programmers. Connects you a website that is very similar to a social network, your profile, news page, group chats and private messages. Add to this page with a visualization of the school curriculum, completed, and failed tasks, diary and success.

Usual for the traditional school things don't just disappear, they re-formed and adjusted to work with the gadgets. Control work be tests and written works, poems and speeches are in video format, and current estimates you can earn simply by performing the optional tests and tasks.

## What are the pros?

**Mobility.** Farewell to lack of sleep and early rises, farewell to crowded morning bus. If you are on distance learning, then you can learn at home even in his pajamas, in a café over a Cup of tea or in transport on the way to another country; at any place where you can sit down with gadget and Internet access. Of course, it is desirable that the atmosphere contributed to the absorption of knowledge. The only thing that for some tasks the desired printer, so from time to time it is necessary to sit at home or find a suitable coworking.

**Schedule.** Is completely individual. For those who have sporting events, work, a lot of extra classes or, for example, another time zone. Under this system, each student can study when it is convenient, the main thing; to keep up with the program. If time management you have not developed, the school will help you to make your schedule.

**Individual approach.** This is not a class where 25-30 students are restricted in the same room. In the distance school work one-on-one with the material and teacher. Therefore, there will not be able to hide behind high classmate who sits in front of you. Will have to learn. The school also takes into account this situation, therefore, asking students about their preferences, future plans, the situation on various subjects in the past, a hobby. Depending on the answers may change an individual program and schedule, the goal of schools to ensure that student receive the maximum that he needed information.

**Material.** Teachers need to stick with the program, however, not limited to just one tutorial, when it comes to choosing material for a lesson. So, one lesson may be information on a topic from multiple sources, media files, teacher comments, links to articles and the like.

**Parents.** Many parents do not like traditional school. It is understandable, it's hard to love her, if you have to get up every morning, encourage your child to go where she does not want to go. And more hours of parent-teacher meetings, the eternal, the collection of money for curtains and repair, poorly organized school activities that you need to look for costumes for performances, homework until late at night and even with the teacher about every bad score it is necessary to understand what set and why. In a remote school it's much easier; once a month by e-mail comes a report of progress (other important information is also sent via e-mail).

**Future.** If you learn the remote to learn at school, then at the end you can enroll in distance learning College or University. On the website [www.ecvdo.ru](http://www.ecvdo.ru) you can see which educational institutions offer such training. You can easily combine study and work, study and travel, study and hobby or sport.

## What are the disadvantages?

**Socialization.** During the transition to distance learning parents are often worried about socialization. But actually it is no problem. All teachers and students are in the same cyberspace, so you can communicate with each other at any time. Moreover, there is still enough time to go to mugs and sections, to chat with their friends.

**The transition itself.** It seems to change time zone. Need time [do an essay for me fast](#) to adjust and get used to the changes. It all starts with the fact that September 1, you get up, whenever you want and view a instruction to the school website, instead of having to go to the range (which, incidentally, is another plus). And then; adapt. A very important time management. If you are not able to organize their time; learn to do it, find someone who will do it for you or just don't go for distance learning. Because of the ability to allocate time very much depends on the success of.

**Internet.** Distance learning; it is dependent on the Internet. But not so when the person never releases the phone from his hands. No. I mean only that a bad connection, any problems with WiFi, lack of quality 3G; it is the inability to learn, and this is a waste of time! In addition, because distance education in Ukraine; new, they sometimes make updates to eliminate errors, making the site unavailable for a while. Such a situation occurs unplanned day off. At first glance, is a plus, but really; again a waste of time.

**Money.** The school paid. Because we need good teachers and good programmers. Because such schools are not publicly funded (although the certificate will be the same as in public school). So the price is justified.

Distance education &#8211; it really is a full education, so if you are not willing to work on ourselves constantly to fulfill all the tasks and to deal with his laziness if the problem is not the format of training, and that you just don't like to study, stay in a traditional school. Because to write, to walk and to sit back there. If you are not afraid of difficulties, you are open to new ideas and love to learn &#8211; congratulations to the world's remote homeschooling.
